## Design

The Hallite 11 is a vee pack rod seal for medium duty applications offering excellent performance and long life even under difficult operating conditions such as pressure surges, vibration and some misalignment. The seal consists of a male and female adaptor and 5 vee rings.

The male adaptor is usually manufactured from polyacetal but some of the larger sizes use rubberised fabric. It has grooves across one face to ensure equal pressure to the sealing edges of the vee ring.

All sizes have three vee rings manufactured from rubberised fabric because this has strength and durability and permits an oil film to lubricate the other parts of the seal. Two rubber vee rings are supplied between the rubberised fabric vee rings (up to and including 140 mm diameter) to aid low pressure sealing.
The female adaptor uses a hard rubberised fabric to support the vee rings and protect them from extrusion damage. At high pressure the lips of the adaptor acts as a secondary seal.

The proportions of the range have been determined to give a satisfactory performance when used with the recommended operating conditions.

## Technical details

## Operating conditions

Maximum Speed
Temperature Range
Maximum Pressure

## Maximum extrusion gap

Pressure bar
Maximum Gap mm
Pressure p.s.i.

## Surface roughness

Dynamic Sealing Face Ød $d_{1}$
Static Sealing Face $\emptyset \mathrm{D}_{1}$
Static Housing Faces $L_{1}$

Figures show the maximum permissible gap all on one side using minimum rod $\emptyset$ and maximum clearance $\varnothing$. Refer to Housing Design section.
